

Letter of Recommendation

To Whom It May Concern,

I am pleased to strongly recommend Rahulkumar Ankola, who served as a Software Engineering Intern at CarbonSustain, Inc. during the Fall 2025 term. In a fast-moving climate software startup environment, Rahul proved himself to be a technically rigorous, dependable, and highly capable engineer who could operate across full-stack systems and complex blockchain infrastructure.

Rahul led our integration with the Hedera network, connecting tokenized carbon assets to our PostgreSQL database and ensuring reliable synchronization between on-chain smart contracts and off-chain records. He specifically linked Puro.Earth carbon credits into our production infrastructure, maintaining data integrity, auditability, and consistency across systems.

Within the Hedera ecosystem, he managed multiple HashPack wallets including four operational accounts and a secure admin account via portal.indexer, and implemented token associations, admin withdrawal controls, and contract maturity logic. He also built a multi-tenant factory architecture supporting ERC-721 NFT SeriesVault collections and fungible CDR tokens, enabling minting, treasury management, liquidity pool compatibility, and full smart contract lifecycle control with enterprise-grade reliability.

Additionally, he integrated external marketplace functionality through Carbonmark, enabling our platform to programmatically purchase and retire carbon credits via API with careful handling of transaction confirmations and system resilience between off-chain calls and on-chain execution. He also developed and implemented a native DEX layer within the platform, allowing customers to buy and sell Series NFTs directly, extending liquidity across our tokenized carbon ecosystem.

Beyond his technical contributions, Rahul distinguished himself through initiative and discipline. He consistently took ownership of complex tasks, independently researched protocol-specific challenges, and delivered clean, well-structured, production-ready code. He communicates clearly, works effectively within a team, and maintains a solution-oriented mindset even when navigating unfamiliar constraints.

Rahul brings a rare combination of full-stack engineering capability, real-world blockchain deployment experience, and the determination required to build scalable systems in emerging infrastructure environments. I am confident he will excel in software engineering, blockchain, or distributed systems roles and contribute meaningfully wherever he goes.

I recommend him without reservation.

Sincerely,
Paul Bryzek
Chief Executive Officer
CarbonSustain, Inc.
