EDUCATION

MS in Computer Science | Rutgers University at Camden | Camden, NJ GPA: 3.9/4
B.Tech in Computer Science | Vellore Institute of Technology | Vellore, India GPA: 3.4/4

EXPERIENCE

CarbonSustain Berkeley, CA
Full Stack & Blockchain Developer Sep – Dec 2025

- Built full-stack features with React, Node.js, and REST APIs for emissions tracking, carbon credit issuance/retirement, and sustainability data pipelines.
- Deployed Solidity smart contracts integrating ERC-20, ERC-721, and ERC-1155 tokens, connecting on-chain logic to backend services in production.

Rutgers Accelerate & Renew Academy Camden, NJ
Tutor / Mentor Jan – Aug 2025

- Provided academic support to students at a community center, teaching math and introductory programming.

GGN Research Rajkot, India
Software Engineer Feb & Dec 2024

- Debugged and resolved backend issues in high-traffic production apps, improving stability across APIs, database queries, and server-side logic using JavaScript and Python.

National University of Singapore Singapore
Academic Internship | Machine Learning & AWS July 2023

- Completed GAIP with NUS School of Computing and Amazon AWS, applying deep learning and data analytics to real-world business problem statements.
- Led the Demand Dynamics project, developing and deploying a CNN–MLP sales forecasting model on AWS.

LST Capitals Remote
Software Engineer June 2023

- Built a portfolio visualizer tool for a client to analyze and display investment data.

TECHNICAL PROJECTS

Waypoint | Next.js, Supabase, Google Maps API, Claude AI Mar – May 2026

- Built a full-stack road trip planner with multi-stop routing, route alternatives, and drive-time estimates using Next.js 15, Google Maps API, and Supabase.
- Integrated Claude AI for an in-app trip companion with live stop suggestions; deployed on Vercel with a mobile-first, dark-mode UI.

ERC4337-Paymaster | Solidity, Account Abstraction, Ethereum, Hardhat Jan – May 2026

- Implemented an ERC-4337 Paymaster contract on Ethereum enabling gas fee sponsorship and gasless transactions for end users.
- Built and tested the full AA stack — UserOperation handling, EntryPoint interaction, and on-chain validation — using Solidity and Hardhat.

EvoStruct-Sub | Machine Learning, Feature Extraction Jan – Apr 2025

- Developed a Gram-positive protein subcellular localization predictor combining evolutionary, sequence-based, and structural features, achieving high classification accuracy.

EduMetric Solutions | Big Data Analysis, PowerBI Aug – Dec 2024

- Built a student career planning platform with ROI analysis across college options and job data; integrated PowerBI dashboards to visualize pathways and expected outcomes.

Demand Dynamics | Machine Learning, AWS July 2023

- Predicted 3-month sales using CNN + MLP models on historical data; deployed on AWS for real-time visualization and inventory planning

PUBLICATION

Doi: 10.1145/3639233.3639343 Aug 2023 – Feb 2024
Empowering Precision in Financial News: Editorial Classification through Cutting-Edge Natural Language Processing.

TECHNICAL SKILLS

- Programming & Databases:** React, Next.js, Node.js, JavaScript, TypeScript, Python, Solidity, RESTful APIs, AWS
- Blockchain & Web3:** Smart Contracts, Ethereum, Hardhat, Ethers.js, Hedera Hashgraph, ERC-20/721/1155/4337
- Tools & Practices:** Git/GitHub, Linux, Docker, PowerBI, Agile, Project Management, Team Leadership
